## Cell Phone USB Tether Connection Issue

Posted by sebogawa - 2008/11/15 01:04

---

I have a blackberry 8100 (perl) and i setup the Standard Modem that comes with the Blackberry Desktop Software... I looked online and go the step by step on how to configure it so that it responds and dials...when I set it to connect the first modem tone comes up followed by another similar tone then a significantly lower tone and then another tone that is a bit higher which seems to go on forever... if i were to rate the tones on a scale of one to ten, ten being very loud they would be as follows: 8, 9, 5, 3 and the 3 goes on until the connection is timed out...is there anything i can do to solve this?

I am running vista with my firewall off

i am sorry.. i really have no clue on how to help you with this.  
i suggest trying a regular modem in the laptop or pc to confirm the service works.. and then try again with the blackberry.

if it still fails call their support.

:-(
