

CALLER-ID is NOW REQUIRED!

Starting April 16th, 2002; all freedialup users must allow their caller-id information to be passed, and can not block their phone numbers from this service. Caller-id is used to identify who is connecting and using our free service, and will be used to block abuse on our services (mainly but not limited to spammers). If you can not connect or if this is the only website you can access, your caller-id might be blocked. You need to dial *82 (or whatever disables caller id through your phone company) before you dial into our servers.
